

SURYA TEJA REDDY

Full Stack Developer | Cloud Engineer | CI/CD Specialist

✉ Email: bsuryateja777@gmail.com | 🌐 Portfolio: <https://portfolio-g8xb.onrender.com/> | 🇮🇳 India

PROFESSIONAL SUMMARY

Full Stack Developer and Associate Software Engineer at Accenture with 6+ months of hands-on experience in cloud infrastructure provisioning, MERN stack development, and CI/CD automation. Demonstrated expertise in designing and implementing production-ready deployment pipelines with quality gates, containerization with Docker, and infrastructure-as-code using Terraform. Passionate about building scalable systems across the full stack—from React frontends and Node.js APIs to cloud infrastructure and automated deployment orchestration.

PROFESSIONAL EXPERIENCE

Associate Software Engineer

Accenture | Client: Siemens Data Cloud (SDC L1) | Oct 2024 – Present

- Infrastructure-as-Code (IaC) Development:** Architecting and maintaining reusable Terraform modules for multi-environment cloud deployments (development, staging, production) with automated infrastructure provisioning and feature-flag-driven configuration management
- Azure Cloud Infrastructure:** Provisioning and managing enterprise-grade Azure cloud infrastructure including compute services, networking, containerization, databases, and monitoring solutions
- Terraform Module Design:** Designing scalable, modular Terraform code supporting multi-service deployments with automatic dependency resolution and environment-specific configurations
- Container Orchestration & Microservices:** Working with Azure container services and Kubernetes for deploying and managing microservices-based applications
- Cloud Architecture & Best Practices:** Implementing infrastructure automation, CI/CD pipeline integration, and security best practices for cloud deployments
- Team Collaboration:** Supporting cloud architecture teams on infrastructure design decisions and deployment strategies for enterprise cloud solutions
- Tech Stack:** Terraform, Azure, Infrastructure-as-Code, Cloud Architecture, Bash scripting, Git, CI/CD integration

TECHNICAL PROJECTS

1. CI/CD Framework | Production-Ready Deployment Pipeline

GitLab | [Repository \(https://gitlab.com/bsuryateja777/cicd-learning\)](https://gitlab.com/bsuryateja777/cicd-learning)

A comprehensive framework demonstrating enterprise-grade CI/CD practices and deployment automation:

- CI/CD Pipeline Automation:** Implemented complete GitLab CI/CD pipeline with multi-stage orchestration (Quality → Build → Deploy-Dev → Deploy-Prod)
- Code Quality Gates:** Integrated ESLint, Prettier, SonarQube, and Veracode for automated quality enforcement; quality gates block code from progressing if checks fail
- Containerization:** Docker-based application packaging and Azure Container Registry (ACR) integration
- Git Hooks Automation:** Configured Husky with pre-commit and pre-push hooks for automatic code quality checks before code reaches Git
- Jest Testing & Coverage:** Unit testing framework with 80%+ code coverage reporting and quality metrics
- Cloud Deployment:** Multi-environment deployment to Azure (Dev and Prod environments with manual approval for production)
- Documentation:** Comprehensive learning guides covering CI/CD concepts, GitLab setup, Azure configuration, and troubleshooting
- Tech Stack:** GitLab CI/CD, Docker, Azure, Node.js, ESLint, Prettier, Jest, Husky, SonarQube, Veracode

Key Learnings: Enterprise pipeline design, quality gates as code, containerization best practices, automated testing integration, cloud deployment strategies

2. RentEase | Full-Stack MERN Booking & Hosting Platform

Live Demo | [Frontend \(https://rentease-frontend.onrender.com\)](https://rentease-frontend.onrender.com) | [GitHub Repository \(https://github.com/bsuryateja777/RentEase\)](https://github.com/bsuryateja777/RentEase)

A production-grade MERN rental marketplace enabling property listing and booking management:

- Full-Stack Architecture:** React frontend with Node.js/Express backend and MongoDB database
- Authentication & Security:** JWT cookie-based authentication with bcryptjs password hashing for secure user sessions
- Image Management:** Cloudinary integration for scalable photo uploads and management
- Search & Filtering:** City-based property search with advanced filtering capabilities
- Booking System:** Multi-photo listings with date-range booking system and tiered dynamic pricing
- Database Design:** MongoDB schemas optimized for rental marketplace operations
- Deployment:** Hosted on Render with environment-based configuration
- Tech Stack:** React, Node.js, Express, MongoDB, JWT, Cloudinary, bcryptjs, Render

Features: User authentication, property listing/management, booking flow, payment-ready pricing system, responsive UI

3. TerraFlex | Modular Feature-Flag-Driven AWS Infrastructure Framework

GitHub Repository | [TerraFlex \(https://github.com/bsuryateja777/TerraFlex\)](https://github.com/bsuryateja777/TerraFlex) | Open-Source Terraform Project

A production-ready, enterprise-grade Terraform framework for provisioning AWS infrastructure on-demand with automatic dependency resolution:

- Feature-Flag Architecture:** Every AWS service (VPC, EC2, RDS, ECS Fargate, ALB, NLB, App Runner, Amplify, ECR, CloudTrail) is opt-in via boolean flags
- Automatic Dependency Resolution:** Framework intelligently handles service dependencies—enabling one service automatically provisions required prerequisites
- Multi-Environment Support:** Environment-specific configurations (dev, staging, prod) with consistent infrastructure patterns
- Remote State Management:** S3 backend with DynamoDB locking for team-based Terraform state management
- Reusable Modules:** Modular design enables quick infrastructure provisioning and scaling
- Infrastructure-as-Code Best Practices:** Version-controlled, testable, and reproducible infrastructure
- Tech Stack:** Terraform, AWS (VPC, EC2, RDS, ECS, ALB, NLB, ECR, CloudTrail, Amplify), S3, DynamoDB

Capabilities: Provision complete AWS infrastructure stacks, support multi-environment deployments, enable rapid infrastructure iteration

4. MicroServices | Containerized Event-Driven Microservices Architecture

GitHub Repository | [MicroServices \(https://github.com/bsuryateja777/MicroServices\)](https://github.com/bsuryateja777/MicroServices) | E-Commerce Platform

A sophisticated microservices-based e-commerce platform demonstrating advanced distributed systems patterns:

- Service Architecture:** 6 independent Node.js/Express microservices:
 - API Gateway:** Request routing and load balancing
 - Auth Service:** User authentication and authorization
 - Product Service:** Catalog management
 - Cart Service:** Shopping cart operations
 - Order Service:** Order processing
 - Wallet Service:** Payment and wallet management
- Asynchronous Communication:** Apache Kafka integration for event-driven workflows between Order and Wallet services (payment event streaming)
- Containerization:** Docker Compose for local development, structured for Kubernetes deployment

- **Deployment Strategies:** Three independent branch configurations:
 - **Local Branch:** Docker Compose for development
 - **Docker Branch:** Containerized services
 - **Kubernetes Branch:** Container orchestration-ready
- **Database Strategy:** Independent databases per service following microservices pattern
- **Scalability:** Service decoupling enables independent scaling and deployment
- **Tech Stack:** Node.js, Express, Apache Kafka, Docker, Docker Compose, Kubernetes, MongoDB/MySQL

Patterns Demonstrated: Service-oriented architecture, event streaming, containerization, orchestration, async communication

TECHNICAL SKILLS

Programming Languages

- JavaScript, Java, HTML, CSS

Frontend Development

- React.js, HTML5, CSS3, Responsive Design

Backend Development

- Node.js, Express.js, API Design, RESTful Services

Databases

- MongoDB, MySQL, Snowflake, Database Design

Cloud & Infrastructure

- **Azure:** Infrastructure provisioning and management, container services, networking, databases, monitoring, compliance and security
- **AWS:** VPC, EC2, RDS, ECS Fargate, ALB, NLB, App Runner, ECR, CloudTrail, Amplify
- **Infrastructure-as-Code (Terraform):**
 - Modular Terraform design with reusable modules and components
 - Multi-environment deployments (dev, staging, production)
 - Feature-flag-driven provisioning with automatic dependency resolution
 - Infrastructure state management and version control
 - Bash scripting for infrastructure automation and validation

DevOps & CI/CD

- GitLab CI/CD, GitHub Actions, Docker, Docker Compose
- Quality Gates, Git Hooks (Husky)
- Code Quality Tools: ESLint, Prettier, SonarQube, Veracode

Testing & Code Quality

- Jest (unit testing), code coverage, quality metrics
- ESLint, Prettier, code formatting standards

Message Queues & Event Streaming

- Apache Kafka, async event processing

Containerization & Orchestration

- Docker, Docker Compose, Kubernetes basics
- Azure Container Registry (ACR)

Data & Analytics

- Snowflake
-

EDUCATION

B.Tech in Computer Science

CERTIFICATIONS & CONTINUOUS LEARNING

- CI/CD Pipeline Automation and Best Practices
 - Infrastructure-as-Code with Terraform
 - Microservices Architecture and Design Patterns
 - Cloud Deployment on Azure and AWS
-

KEY ACHIEVEMENTS

- ☒ **Enterprise Infrastructure-as-Code:** Architected and maintained Terraform modules for multi-environment cloud deployments with feature-flag-driven provisioning and automatic dependency resolution
 - ☒ **Production CI/CD Pipeline:** Built enterprise-grade CI/CD pipeline with automated quality gates (ESLint, Prettier, SonarQube, Veracode) preventing bad code from reaching production
 - ☒ **Cloud Architecture Design:** Designed scalable cloud infrastructure supporting microservices deployments with proper networking, security, and monitoring practices
 - ☒ **Multi-Environment Deployments:** Implemented infrastructure provisioning systems supporting development, staging, and production environments from single codebase
 - ☒ **Event-Driven Architecture:** Developed microservices platform with async event streaming using Kafka for real-time payment processing
 - ☒ **Full-Stack MERN Development:** Deployed production-ready MERN applications with authentication, cloud storage, and dynamic pricing on Render
 - ☒ **Code Quality Automation:** Implemented git hooks and quality checks reducing manual code review overhead
 - ☒ **Infrastructure Automation:** Designed modular Terraform code enabling rapid provisioning of complex cloud services with feature-based customization
-
